

Comfort Solutions for Window Unit Replacements.

Upgrade to efficient, ductless comfort — No window needed.

While window units offer a quick fix for summer or extra heat in the winter, they often come with compromises. Replacing outdated window units with efficient, quiet ductless mini splits is a smart way to upgrade indoor comfort and energy efficiency without major renovation, while adding value to your home.

Daikin ductless systems offer a sleek alternative designed to enhance comfort, reduce noise, and free up valuable window space that was once occupied by a window unit.

Why Mini-Splits are Perfect as a Window Unit Replacement:

Interior Design: Don't compromise your interior look with an unsightly window unit. Enhance your home's interior with a sleek, modern, and discreet heating and cooling solution.

Flexible, Space-Saving Design: Mini split systems are compact, ductless, and can be mounted on walls, floors, or ceilings.

No Ductwork Required: Like your window unit, a mini-split system allows you to avoid the hassle and expense of installing ductwork yet blends into your home without blocking your view.

Quiet Operation: Enjoy peaceful indoor comfort without the noise of a window unit.

Quick Installation: Mini-split systems can be installed in a few hours* and with minimal disruption to your property. Some Daikin systems operate on 115V, making them compatible with standard residential electrical systems without the need for an electrical panel upgrade.

Safety and Security: A poorly installed window unit may compromise safety and security. A mini-split is securely mounted inside, avoiding any opportunity for removal for entry.

*Installation time may vary based on job scope and conditions.

- » Home office with frequent electronics use

Why Choose Ductless HVAC over a Window Unit?

- Energy Efficiency:** Mini-split heat pump systems are designed to provide all-electric, year-round indoor comfort. This means low utility bills and a small carbon footprint. Older window units are notoriously known to be energy guzzlers, constantly working overtime.
- Zoned Comfort:** You control the temperature in a room or zone independently, ensuring your new space remains comfortable without wasting energy on unoccupied areas. And you can easily turn them off when not in use, without affecting the rest of the house.
- Improved Air Quality:** Some mini-split systems come equipped with advanced filtration technology that helps remove dust, allergens, and other pollutants from the air.
- Convenience:** In some cases, window units are being set up or removed depending on the season. No more heavy lifting when it is time to add that extra cooling to the room, a ductless mini split is installed permanently.
- Warranty:** Daikin ductless mini-split systems offer a 12-year Parts Limited Warranty**
